

Electricity Box Camera

EYE LEVEL ID-CAMERA

The electricity box camera is neutral in appearance, shielding the camera from view and allowing it to be placed at the right height to see in under caps and hoods, for example. Developed since 1978 it is the first in a range of products to address the shortcomings of cameras positioned high up. The difference in how identifiable subjects are in the pictures is shown below.

The lens of the electricity box camera gives a $\sim 75^\circ$ angle of view and is available in plastic.

The electricity box camera is delivered ready to use.

*Traditional placement:
camera height 2.5 m (8.2 ft)*

*Electricity Box Camera:
camera height 1.6 m (5.2 ft)*

Camera Device Option AXIS 209FD / AXIS 209MFD
